ANALYZE

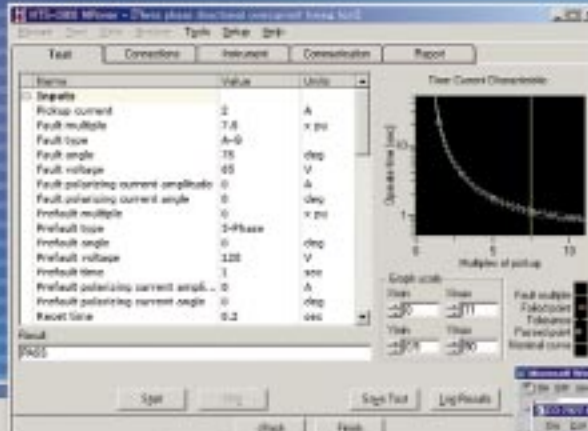

MPower

MPower is your solution to the entire scope of protection test activities: management, execution, reporting, and analysis. If you perform protection testing regularly or occasionally, you will find that MPower is unmatched in its ease-of-use, attention to quality, and ability to deliver immediate productivity payback.

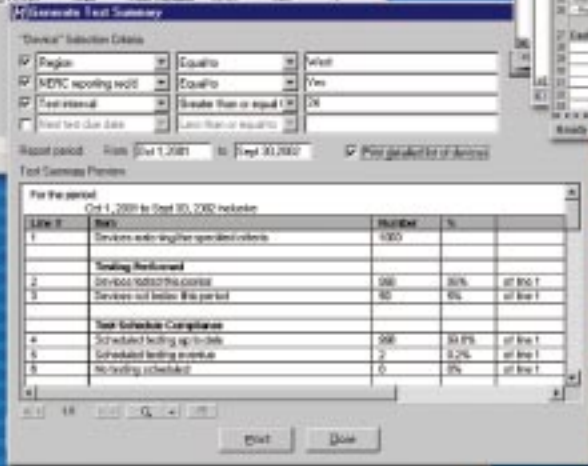

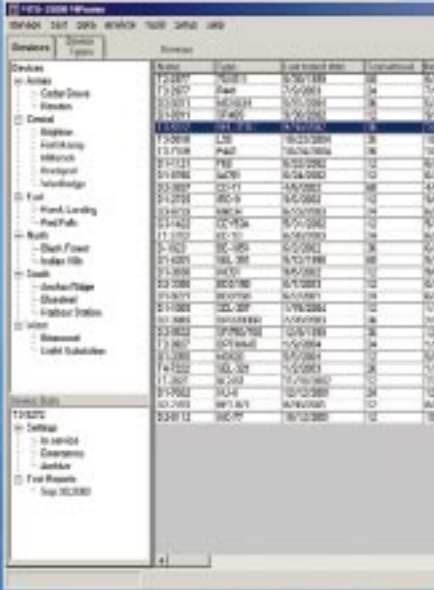

MANAGE

- Organize and centralize device data, protection settings, and test reports
- Customizable device database
- Create maintenance testing schedules automatically

EXECUTE

- Start testing immediately without prepared test plans or procedures
- Device specific test procedures provide complete and consistent automated tests for all devices of a specific type
- Watch live phasor diagrams of voltages and currents during test execution

REPORT

- Effortless formatted test reports
- Export test reports to RTF, MS Word, MS Excel, HTML, CSV, or XML formats
- Report format meets ISO 9000 and nuclear requirements

ANALYZE

- Supports reporting requirements for NERC and regional power coordinating councils
- Measure productivity and test success rates
- Generate statistics from searches or queries
